Problem Statement: Build a Smart AI Assistant for Student Productivity and Learning

Overview

Students today handle multiple academic tasks such as understanding new concepts, preparing for exams, organizing study materials, managing assignments, and staying productive. While many digital tools exist, most of them solve only one part of the problem. There is a need for an **intelligent AI assistant that can support students in learning, research, and productivity through a single unified system.**

Task

Design and develop a **Smart AI Assistant application** that helps students perform academic or productivity-related tasks effectively.

The assistant should be able to understand user queries, process different types of inputs (such as text, voice, or images), retrieve relevant information when needed, and provide structured and useful outputs.

Your solution should go beyond a simple chatbot and demonstrate **multi-step reasoning or intelligent task execution.**

Expected Features (Students can choose relevant ones)

- Answer questions from uploaded notes or study materials
- Generate concise summaries or revision points for exam preparation
- Create visual or content-based outputs such as posters or concept explanations
- Support voice-based interaction for asking questions or receiving responses
- Perform step-by-step reasoning to solve research or learning queries
- Automate small productivity tasks such as summarizing content or suggesting next steps

Students are encouraged to **select a meaningful use case and combine multiple AI capabilities into one working system.**

Expected Outcome

By the end of the project, students should be able to demonstrate:

- A working AI assistant prototype
- Integration of multiple AI concepts learned during the training
- A simple user interface or interaction method
- Clear explanation of how the system works and what problem it solves

---

Submission

Students must submit:

- Working demo of the application
- Short document explaining use case, features implemented, and system design
- Final presentation/demo on evaluation day
